A lower bound, with exact equality cases
Mixed 2-qubit states
Pure 2-qubit states
Arbitrary mixed qubits
Quantum Fisher information $F_Q(\rho, P/2)$
Exchange response D_P
0.0
0.2
0.4
0.6
0.8
1.0
Mixed-state sensitivity generally exceeds D
$F_Q = 2p^2/(1+p)$
$D_P = p^2$
Actual exchange QNode
Sensitivity
Bell fraction p in $p|\Phi^+\rangle\langle\Phi^+| + (1-p)I/4$
